1. lstEventB.sty

lstEventB.sty is a LaTeX package for listing Event-B models. It was developed at the University of Southampton.

2. User Guide

2.1 Package Loading

Just like any other package, you need to request this package with a usepackage command in the preamble. So in the simpler case (i.e., without any options), one just types

\usepackage{lstEventB}

to load the package

2.2 Package Options

lstEventB.sty currently support the following options

 \bullet colour | color : Enable the colours for Event-B code.

2.3 Typsetting Event-B Code

The current supported syntax is from CamilleX. In particular, the Event-B mathematical symbols can be typeset using Unicode symbols. Alternatively, the mathematical symbols can be typeset using ASCII combinations (similar to the Event-B Summary, with the exception that the text combinations must be prefixed by ! (this is to prevent unintended translation of text in longer words). Some other symbols, e.g. ... and || also need to be !-prefixed.

2.3.1 Predicate-related Symbols

The following table shows the ASCII input for typesetting predicate-related symbols.

ASCII	Symbols	Explanation
!false	上	False
!true	T	True
&	\wedge	Conjunction
!or	V	Disjunction
=>	\Rightarrow	Implication
<=>	\Leftrightarrow	Equivalence
!not	_	Negation
!	\forall	Universal quantification
#	3	Existential quantification
1.		Quantification dot
=	=	Equality
/=	#	Inequality

{:height="700px" width="400px"}

2.3.2 Set-related Symbols

The following table shows the ASCII input for type setting set-related symbols. $\label{eq:continuous}$

ASCII	Symbols	Explanation
{}	Ø	Empty set
1		Vertical bar, e.g., in set comprehension
\/	U	Union
/\	\cap	Intersection
\	\	Set difference
->	\mapsto	Ordered pair
**	×	Cartesian product
! POW	\mathbb{P}	Powerset
!POW1	\mathbb{P}_1	Non-empty subsets
!card	card	Cardinality
!union	union	Generalised union
!inter	inter	Generalised intersection
!UNION	U	Quantified union
! INTER	\cap	Quantified intersection
